KEY TECHNOLOGY

WALKMAN **Video MP3 Player**

Video in your pocket

The breakthrough LCD screen technology found in the new A800 Walkman delivers knockout video quality in the palm of your hand.

The 2 inch widescreen boasts QVGA (320 x 240) resolution, perfect for detailed video playback up to 30 fps (30 frames per second).

Sony's unique screen technology also promises rich natural colours and high contrast, making viewing comfortable and immersive.

The most popular MPEG-4 video format is supported, along with the AVC video standard. These advanced video codecs ensure high quality video playback whilst minimising file size. Up to 32 hours of video can be stored, for convenient playback at anytime.*

The screen can be orientated to suit differing video content and left or right handed operation.

*8GB model video capacity quoted.

A convenient photo album

The high resolution screen and large internal memory means extensive digital photo albums can be stored and viewed at anytime.

Fast 'drag and drop' photo management will ensure your favourite photos are always at hand.

Music playback whilst viewing photos and slideshows complete this ultra compact digital photo album.

Walkman audio features

Being a Sony Walkman, rich accurate audio quality is a given.

Four different audio technologies known collectively as 'Clear Audio Technology' contribute to sublime audio quality.

Clear Audio technology encompasses the following features:

- **Clear Bass** – for warmer, fuller bass reproduction, without distortion.
- **Clear Stereo** – Sony's unique technology to emphasise the stereo effect often lost when listening to MP3 music. Sound leakage between left and right channels is vastly reduced delivering an optimum stereo sound experience.
- **DSEE** – also known as 'Digital Sound Enhancement Engine' restores the sound of the original recording, that is so often lost when listening to compressed music formats, such as MP3.
- **EX headphones** – The included in-ear headphones boast high quality components for dynamic audio reproduction with wide frequency response. A large 13.5mm driver unit ensures powerful performance free from distortion.

The A800 series Walkman supports playback of the most popular music formats ,including MP3, AAC (non DRM), WMA (non DRM) and ATRAC.

Fast music navigation, including artist search, will ensure you can listen to what you want, when you want.

Walkman Stamina

The Sony A800 series Walkman uses the latest battery technology.

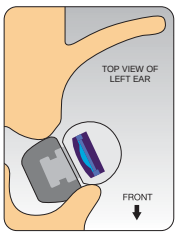
Unlike many other portable devices, the A800 will keep up with the most active lifestyle-boasting approximately 8 hours of video playback and around 30 hours of audio playback time.

Rapid charging and user customised power management means this Walkman continues the long tradition of industry leading battery performance.

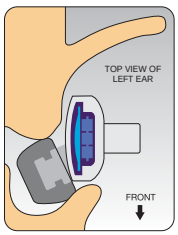
HEADPHONES **EX Monitor**

Applying vast experience in technologies that create professional-grade recording studio monitors, Sony's EX Monitor headphones fuses a larger 13.5mm high-performance driver unit for exceptional sound quality with the fit and comfort of an ear-bud style headphone all in a device that defines a new standard in headphone style and quality.

TRADITIONAL EAR-BUD



EX MONITOR



The orientation of the earpiece matches the orientation of the ear canal, ensuring a more comfortable and stable fit.

Noise-Cancelling

Noise is a factor in many of our lifestyles. We hear it in the engine noise of a bus, train or a plane and even in places such as shopping malls and parks where all sorts of sounds mix.

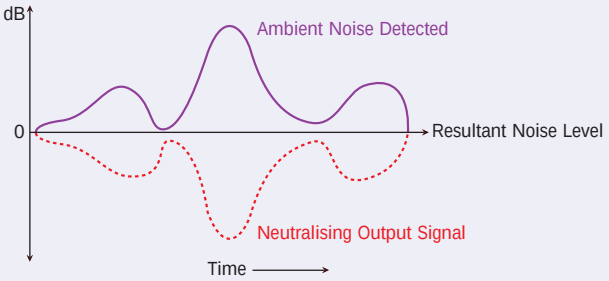
This background noise can interfere with your audio enjoyment and can still come through even a great set of headphones.

For this reason Sony offer headphones with 'Noise-Cancelling' technology. This means that the headphones have microphones built-in to them that can pick up ambient noise and output a signal that effectively 'neutralises' or 'cancels' the noise out. You can have up to 80% of ambient background noise cut out! more music reaching your ears instead.

In addition to noise-cancelling headphones, the S700 series Walkmans have noise-cancelling technology† built-in. Perfect for those who are serious about sound or simply just want to cut out the clutter.

† The S700 Noise cancelling function reduces the ambient noise by up to 75%. It does not cancel all ambient noise.

The microphone used in noise-cancelling technology picks up ambient noise from the background environment and outputs an equal and opposite signal effectively neutralising the sound wave of the noise.



WALKMAN **MP3 Sports**

Utilising a new process called "Impact Molding", the tough, seamless body of the S200 is created from a single block of aluminium. Utilising a unique technology, a seal is applied to the chassis internally, resulting in a sleek and stylish Walkman that's also splash-proof!

Counter Function
With the ability to sense your steps combined with entering your age, weight and height information, the S200 can operate as a modern day pedometer. As such, you can retrieve information such as:
- Calories burned
- Distance traveled (kms / miles)
- Steps taken

The S200 can keep a record of your last seven sessions.

Music Pacer
Create your own compilation in the supplied software and the S200 can sense how fast you are running or walking, and plays the music most appropriate to your step speed.

Shake Shuffle
Using the G-Sensor chip, users can simply switch between 'normal' and 'shuffle' playback modes by shaking the S200 three times without the need to stop the playback of the music and navigate into the menu. Simple and convenient.

Target Setter / Tracker
Set yourself a challenge:
- Calories to burn
- Distance you want to travel
- Steps you want to take

Set the S200 to any of these desired goals and the music keeps playing up until this goal has been reached.
